Unroll plastic film. Do not cut open or remove protective liner.

Confirm that the childproof zipper pull has been removed.

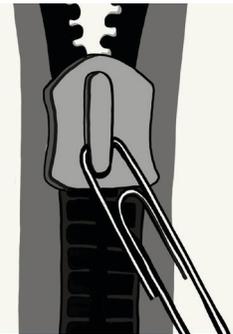

Flip & knead the foam to introduce air back into the micro-cushions.

Micro-cushions will take 24 hours or more to fully expand but the cover can be applied after 20 minutes.

Match the seams of the cover and liner and zip closed. Enjoy!

OPTIONAL: Use a paper clip to open the childproof zipper to add or remove foam from the liner.

Q: I opened my bean bag and it still has some hard clumps in the foam, is this normal?

A: Your foam bag may take 24-48 hours to fully expand from its compressed packaging. Regular flipping and fluffing will help introduce air back into the foam and release any lumps.

Q: My bean bag is too firm for me, can I remove foam to make it softer?

A: Yes you can. While your foam bag should be perfect right out of the box, some customers may choose to remove some foam to make the product sink in more. To remove foam, insert a paperclip into the zipper head on the inner liner. Be ready with a large bag and plastic scoop / cup to scoop up the foam. Hold up the liner around the zipper and slowly zip open. Scoop out a small amount of foam / as desired. When done, zip the liner back up, put the cover back on and enjoy!

Q: My bean bag has gotten kind of hard, it's not as soft as it used to be.

A: Fluff regularly for the softest seat around! Whenever your bean bag needs it, flip it on to one side, push the foam down and around a bit to fluff it back up. Regular fluffing and flipping helps keep your product as comfy as possible. Enjoy!

To clean, remove the cover, machine-wash cold with mild detergent and hang dry. Do not wash the inner liner.
