

This steel plate is attached with a sawtooth hanger protruding off the back of the steel plate which makes hanging your tempered art glass panel a very simple task. For common drywall please use an EZ Anchor available at any Home Depot or Lowes. For other walls such as concrete, brick, etc., please make sure you utilize a screw that is rated for the specific material to hold the appropriate weight.

(1) After attaching the EZ Anchor flush to the drywall please screw the phillips head screw just so it protrudes no more than 1/2". This will enable you to simply lower the sawtooth so it catches the phillips head screw and hangs securely off your wall.

(2) The adhesive foam tape squares are pre-attached so that your art glass panel hangs correctly as it "floats" off of your wall.
